PROFESSIONAL SUMMARY

Security engineer working across SOC operations, Zero Trust identity, and data protection in Azure and M365 environments. Currently securing a PCI-DSS cardholder environment for 1,000+ users and managed endpoints — detection engineering, DLP, and the identity controls behind them. Deployed inline prompt inspection across Copilot and Claude to stop PII, PHI, and cardholder data leaving through AI tools, and automated detection and remediation workflows in Python and PowerShell. MS in Cyber Security, NJIT.

WORK EXPERIENCE

The Breakers Palm Beach

IT Security Analyst

Palm Beach, FL

April 2025 – Present

- Sustained sub-2-hour MTTR across daily alert triage from Sentinel, Bitdefender EDR, email gateway, and network monitoring — running full log and packet-level investigations in a PCI-DSS cardholder environment that operates 24/7.
- Reduced the vulnerability remediation backlog 30% in 6 months by automating patch deployment and Nessus/Tenable reporting workflows in Python and PowerShell — replacing a manual reporting cycle that consumed ~5 hours weekly.
- Hardened identity and device posture for 1,000+ users and managed endpoints by enforcing Zero Trust through Entra ID Conditional Access, PIM governance, and application whitelisting — moving standing privileged assignments to just-in-time approval and eliminating persistent global admin access.
- Led DLP strategy across Microsoft 365, SharePoint, OneDrive, and Smartsheet — deploying Purview DLP and Zscaler CASB across 150+ classifiers to protect PII, PHI, and cardholder data, remediating 120+ over-exposed external sharing links in 2 months and reconciling coverage against FortiGate ACLs and Zscaler web gateway policy.
- Built security controls for enterprise GenAI adoption — deployed inline prompt inspection across Copilot and Claude, authored the acceptable-use policy, and stood up monitoring that blocks PII, PHI, and cardholder data from leaving through AI prompts.
- Cut MXDR alert volume 50%+ by identifying recurring Kerberos ticket-purge (klist) false positives and engineering suppression logic in Sentinel — removing 150+ weekly alerts from the triage queue without loss of detection coverage.
- Cut the phishing-prone rate from 15% to 4.9% in 3 months by onboarding KnowBe4 and running targeted awareness training for 800+ employees.

Rebecca Everlene Trust Company (nonprofit operating twelve integrated health and community programs)

Information Security Analyst

Chicago, IL

August 2024 – April 2025

- Surfaced 15+ critical vulnerabilities in production applications through OSINT-driven penetration testing combined with SAST and DAST — validated and remediated before release.
- Established NIST/OWASP-aligned incident response plans and risk management frameworks across twelve programs including MEDKids, supporting clean HIPAA audit outcomes.
- Integrated SAST, DAST, container scanning, and IaC scanning into CI/CD pipelines, catching security issues pre-release across GCP production environments.

New Jersey Institute of Technology

Graduate Teaching Assistant

Newark, NJ

May 2023 – May 2024

- Taught adversarial ML and defenses against model poisoning and evasion attacks to 100+ graduate students across 3 terms, plus privacy-preserving ML and secure data handling in Python.

PROJECTS

DNS Ad-Block Proxy: From LLM Classification to Deterministic Blocklist Filtering ([Blog](#))

- Prototyped an LLM-based (Ollama) real-time DNS classifier for ad/tracker domains, then redesigned it around an indexed SQLite blocklist after finding LLM inference added 2-5s of latency per uncached domain — the rebuilt version resolves blocklist decisions in <0.01ms with fully deterministic, auditable verdicts.

Android Network Traffic Analysis ([Blog](#))

- Instrumented Android applications with Frida and MITMProxy to intercept TLS traffic and audit third-party ad SDK data handling, surfacing insecure transmission of device identifiers and location data across 10 Android apps.

EDUCATION

New Jersey Institute of Technology — MS in Cyber Security and Privacy, May 2024

Netaji Subhash Engineering College — BTech, Computer Science, July 2022

SKILLS & CERTIFICATIONS

Cloud & Identity: Azure · Entra ID · Conditional Access · PIM · Active Directory · AWS · GCP

Detection & Response: Sentinel · MS Defender XDR · Bitdefender EDR · Incident Response · Threat Hunting · MITRE ATT&CK

Data Protection: Microsoft Purview DLP · Zscaler CASB · GenAI/Copilot prompt inspection · Encryption

Offensive & VM: Nessus/Tenable · Burp Suite · Metasploit · Wireshark · OSINT · SAST/DAST

Compliance: PCI-DSS · HIPAA · NIST 800-53 · OWASP

Automation: Python · PowerShell · SQLite · CI/CD security integration

Certifications and Activity: CompTIA Security+ · AWS Certified AI Practitioner · [TryHackMe](#) (Top 2%) · SC-200 (in progress)
